   QUESTION 51An administrator connects VoIP phones to the same switch as the network PCs and printers. Which of the following would provide the BEST logical separation of these three device types while still allowing traffic between them via ACL? A.   Create three VLANs on the switch connected to a routerB.   Define three subnets, configure each device to use their own dedicated IP address range, and then connect the network to a routerC.   Install a firewall and connect it to the switchD.   Install a firewall and connect it to a dedicated switch for each device type Answer: AExplanation:A virtual local area network (VLAN) is a hardware-imposed network segmentation created by switches. VLANs are used for traffic management. Communications between ports within the same VLAN occur without hindrance, but communications between VLANs require a routing function. RoutingB.   DMZC.   VLAND.   NAT Answer: CExplanation:A virtual local area network (VLAN) is a hardware-imposed network segmentation created by switches. VLANs are used for traffic management. Communications between ports within the same VLAN occur without hindrance, but communications between VLANs require a routing function. Answer: DExplanation: Network address translation (NAT) allows you to share a connection to the public Internet via a single interface with a single public IP address. NAT maps the private addresses to the public address. In a typical configuration, a local network uses one of the designated "private" IP address subnets. A router on that network has a private address (192.168.1.1) in that address space, and is also connected to the Internet with a "public" address (10.2.2.1) assigned by an Internet service provider. QUESTION 56An administrator wishes to hide the network addresses of an internal network when connecting to the Internet. The MOST effective way to mask the network address of the users would be by passing the traffic through a: A.   stateful firewallB.   packet-filtering firewall C.   NIPSD.   NAT Answer: DExplanation:NAT serves as a basic firewall by only allowing incoming traffic that is in response to an internal system's request.
